Saudi Arabia

SUMMARY

,Computer Networks specialist with hands-on experience in end-user support, Windows Server administration, and network infrastructure management. Skilled in configuring and managing Active Directory, DNS, DHCP user accounts, permissions, and Windows Server services. Experienced in network monitoring, troubleshooting connectivity and performance issues, IP addressing, VLANs, routing, switching, and network configuration. Capable of diagnosing and resolving hardware, software, system, and network-related issues while providing effective technical support to end users. Familiar with network security fundamentals, infrastructure monitoring, and maintaining reliable and efficient IT environments

EDUCATION

Higher Diploma in Computer Networks - 2024-2027

Imam Muhammad ibn Saud Islamic University — Computer and Information Sciences —

Computer Networks - GPA: 4.40

Technical EXPERIENCE

- **End-User Support** — Windows troubleshooting, user accounts, permissions, and system configuration.
- **Windows Server Administration** — AD DS, DNS, DHCP, file services, and server management.
- **Network Administration** — VLANs, IP addressing, subnetting, and network configuration.
- **Routing & Switching** — OSPF, inter-VLAN routing, STP, and Layer 2/3 troubleshooting.
- **Network Troubleshooting** — Diagnosing connectivity, DNS, DHCP, and routing issues.
- **Network Monitoring** — Monitoring network connectivity and identifying performance issues.
- **Cisco Networking** — Router and switch configuration and troubleshooting.
- **Network Diagnostics** — Ping, Tracert, NSLookup, ARP, and other diagnostic tools.

PROJECTS

Graduation Project — Enterprise Multi-Branch Network Infrastructure

- Designed and implemented a **scalable three-branch enterprise network infrastructure**, providing secure and reliable connectivity between all locations.
- Developed a structured **IP addressing scheme** and implemented **VLAN segmentation, inter-VLAN routing, OSPF, STP, VTP, and DHCP** across the network.
- Implemented **network redundancy and high-availability mechanisms** to improve reliability and minimize service disruption.
- Designed and configured a **DMZ** to securely isolate externally accessible services from the internal corporate network.
- Deployed an internal **web hosting environment** for the company, integrating the web server into the network infrastructure and internal DNS services.
- Implemented **centralized Windows Server management** using **AD DS, DNS, DHCP, OUs, security groups, user management, permissions, and shared resources**.
- Established **network monitoring using SNMP** to monitor network devices, interfaces, availability, and overall infrastructure health.
- Configured and managed **Cisco routers and switches**, including Layer 2 and Layer 3 services across the enterprise infrastructure.
- Performed comprehensive **network troubleshooting, performance analysis, and connectivity diagnostics** across routing, switching, DNS, DHCP, and server services.
- Designed the infrastructure with a focus on **security, scalability, centralized management, redundancy, and operational reliability**.

LANGUAGES

- **Arabic:** Native
- **English:** Professional

SKILLS

- Effective Communication · Active Listening · Analytical Thinking
- Critical Thinking · Attention to Detail · Problem-Solving
- Emotional Intelligence · Fast Learner · Adaptability
- Teamwork & Cooperation
